

V.3.21.PS

TEAM 3161

Tubing must be max 1/4" (6mm) OD.

There is no rigid rule on what color pneumatic tubing should be in FRC.

However it is recommended to color code your tubing to differenciate between stored and working pressures.

This Diagram is not official and any specifications on it is based off the 2024 FRC Game Manual.

Always check the latest game manual for final rules and regulations on the FRC pneumatic system.
